Subject: Visit to Domingo Railroad Sampling Sites

Lisa, Can you please plan on going out to the site sometime Wednesday, Thursday, or Friday. Leandro said towards the end of the week but could not confirm until the beginning of the week. The purpose of the visit will be to do the following:

1. Re-visit the site, for your benefit in finalizing site sketch, layout and to select sampling locations. If it is a good day we could even flag the locations if you want, although it may be too early. At least we could select the sampling locations for the sketch in the SAP which needs to get out to LaDonna for her approval. We can take measurements using the GPS unit and the wheel.
2. Visit the drinking water wells - residential installations to determine sampling procedures and logistics. Leandro said one of the wells has a water softener on it - we need to figure out if we can bypass that. Another well does not have a working pump right now. Leandro said he will check if they have a pump.
3. Go to the SDAF well house and retrieve the drums that are stored there. Hopefully the empty, unused ones are still there. Depending on what you/we decide for the SAP procedures, we may be needing to collect rinsate. If we use a drill rig, there will be more volume of rinsate water from the deconing of the rig, then if we just did hand auger sampling. In the wellhouse there are two drums full of rinsate and purge water. These drums are heavy and should still be there. Since the analysis came back clean for this water, we can dump out the water and re-use these drums for the rinsate collected at your site. We will need muscle help in moving and emptying these drums. If time permits we can do this at this time, while out there, or just plan on doing it prior to sampling.
4. Anything else that you want to do out there. I suggested to Glenn that he go with us to assist us, because we could use help with measurements, any physically demanding mechanical maneuvers such as with the well housings, drums and carrying equipment, and also as community relations contact being that he is from Santo Domingo.

Let me know what you think. Linda
